

J. MARTIN SMIT

j.m.m.smit@uva.nl | jmsmit.com

Summary

AI researcher focused on conceptualising and modelling complex sociotechnical systems (e.g. the digital services economy, social networks), with an emphasis on identifying effective design decisions or policies that ensure fairness. Currently a PhD student in the [Prosocial Dynamics Lab](#) at the University of Amsterdam supervised by [Fernando P. Santos](#).

Education

PhD, Artificial Intelligence – University of Amsterdam	2022–Present
Game-theoretical modelling of cooperation and fairness in sociotechnical systems.	
Thesis supervisor: Dr. Fernando P. Santos	
MSc with Merit, Mathematical Sciences – University of Oxford	2021–2022
Statistical machine learning, deep learning, optimisation, network theory	
Thesis supervisor: Dr. Rafael Bailo	
BSc (Hons) First Class, Mathematics and Statistics – University of Warwick	2017–2021
Intercalated year at ENSAI and Quantcube Technology	

Experience

Consultant Data Scientist – West Midlands Combined Authority, United Kingdom	2021
Analysing telematics data of emergency services and presenting insights into fleet efficiency, response times, environmental impact, and security risks.	
Data Scientist – Quantcube Technology, France	2020
Constructed macroeconomic indicators for traders from naval GIS data. Identified and optimized a bottleneck in a data pipeline run daily, providing a 3000% speed-up.	

Open Source Contributions

Agents.jl – Various contributions, notably refactored internals for a 2x runtime optimisation.	2023
MultiMixer – Author, the package implements an N-dimensional MLP Mixer in JAX.	2022

Skills

Technologies: Git, Unix, Julia (SciML), Python (Equinox, DiffraX, JAX), SQL, R, MATLAB, BQN
Languages: English (Native), French (B2), Spanish (B2)

Technical Writing

Modern Julia Workflows 2024

Co-authored a set of articles that introduce Julia users of all levels to tools and techniques for writing, sharing, and optimising code. I wrote and edited the pages on “Writing” and “Optimization”. This work was commended during the JuliaCon 2024 “State of Julia” Keynote talk and has been adapted into a section of the “[Modern Financial Modeling](#)” textbook.

Minimizing Julia’s Latency 2023

I wrote this tutorial to address a pain-point to new Julia users: the JIT-induced delay in the initial execution of code. The video gives an overview of compilation in Julia and why this causes execution latency, before introducing methods to address the latency.
